

Open Access Policy

CMI Open Access (OA) policy

- In accordance with the Research Council of Norway's requirement, CMI is a **Green Open Access institution**. This implies that we will make sure that we have a complete digital archive of all written outputs where a CMI employee is author or co-author, including peer reviewed journal articles.
- The author of the article is the copyright holder unless and until you transfer the copyright to someone else in a signed agreement. An **author's addendum** ensures that you keep the right to archive a digital version of your article and that you maintain the right to use the article for professional purposes like lectures, conference presentations etc:
 - <https://sparcopen.org/our-work/author-rights/brochure-html/>
 - **Access Reuse Addendum:** https://sparcopen.org/wp-content/uploads/2016/01/Access-Reuse_Addendum.pdf
- Check your journal/publishers policy regarding self archiving here :
 - <http://www.sherpa.ac.uk/romeo/search.php>

It is mandatory for researchers to archive all their written outputs in CMI's institutional repository

Researchers are responsible for registration of all their external publication outputs at www.cmi.no, including peer reviewed journal articles, book chapters, blogs and op-eds etc and for uploading a digital copy of the publication at www.cmi.no. This will automatically lead to open access compliance for the uploaded publication.

- All members of staff are obliged to deposit a version of the scientific articles produced in connection with the employment relationship into the institutional repository.
- Please aim to publish articles through the Openscience.no agreements.
- Most publishers allow personal and institutional archiving, but not all publishers allow archiving of post-print version of article.
- When the publisher permits institutional archiving of the publisher's pdf, then this is the preferred choice. If the publisher does not allow this, a "post-print" version, the final manuscript version following peer-review, is the second best version. If the publisher does not permit to deposit a post-print version, a pre-print version should be uploaded.
- Open access fees for books should be included in RCN applications since manuscripts cannot be uploaded to cmi.no without permission from the publisher. See ([Forskningssradets retningslinjer for åpen tilgang til vitenskapelige bøker \(forskningssradet.no\)](http://forskningssradets.retningslinjer-for-apan-tilgang-til-vitenskapelige-boker-forskningssradet.no)).
- Our main rule is that we do not pay for Open Access, because we upload our publications to cmi.no in our self-archiving process (as long as we have filled out an "Author's Addendum"). However, some journals are open

access only, and the only way to publish in them is by paying a fee (the Article Processing Charge).

- CMI may therefore cover the Article Processing Charge (APC) if the journal is an only Open Access journal, and it is at level 1 or 2 in the Norwegian Register, and the corresponding author is affiliated with CMI. This is evaluated on a case-by-case basis, and one must apply to one's Research Director for consideration.

The researcher will use an author's addendum when necessary to ensure that a version of the article can be archived in the CMI institutional archive.

How to register Open Access article at cmi.no:

See step-by-step how you can register your publication at www.cmi.no and comply with the open access requirement:

1. When we register our publication at www.cmi.no, always upload a version of your publication. Upload one of the following, in prioritized order:
 1. Publisher's PDF [the final PDF you have received from the publisher]
 2. Author's post-print (final version post-refereeing. Accepted version)
 3. Author's pre-print (pre-refereeing. Working paper version)

Depending on what the contract with the publisher allows for; you can check what each publisher allows for at <http://www.sherpa.ac.uk/romeo/search.php>.

When you register the publication at www.cmi.no, you can enter an embargo date if the publisher requires that the publication cannot be immediately released.

2. When we sign the contract with the publisher, we should ask them to sign an "[Author's addendum](#)" to the contract. This helps retain certain rights with the author to disseminate and use the publication.

Why we have to do this:

- There is a requirement to make publicly funded research available to the public (for example RCN has such a requirement).
 - CMI wants to have a complete institutional archive of all our outputs – including peer reviewed articles / books / book chapter.
-

[See Procedures for uploading and archiving all CMI output.](#)
